Call Center Performance Report

Q1 2021 (January — March)

EXECUTIVE SUMMARY

This report presents an analysis of call center performance for Q1 2021, covering a total of 5,000 calls handled by 8 agents across five topic categories. The analysis evaluates agent performance, call resolution, response efficiency, and customer satisfaction to identify strengths and areas requiring improvement.

1. OVERALL PERFORMANCE

Our call center data reveals a concerning gap between answered calls and successfully resolved issues.

While agents manage to answer 81.08% of incoming calls, only 72.92% of these cases achieve resolution. This 8.16% difference represents customers who received attention but not solutions — potentially creating frustration and repeat calls.

Call volume has remained relatively stable across Q1 2021, with a slight decrease from January (1,772 calls) to March (1,612 calls).

However, the consistent proportion of unanswered calls (around 300–320 per month) suggests a persistent capacity issue rather than seasonal fluctuation.

The call center maintained a solid 81% answer rate and 73% resolution rate during Q1 2021. However, approximately 1 in 4 calls remained unresolved, indicating room for improvement in first-call resolution strategies.

2. CALL VOLUME TREND

Call volume showed a declining trend across the quarter:

- **January:** 1,500 answered | 300 unanswered (highest volume month)
- **February:** 1,300 answered | 300 unanswered
- **March:** 1,300 answered | 300 unanswered

January recorded the highest call traffic, suggesting potential seasonal demand or campaign-related activity at the start of the year. Unanswered calls remained consistently at 300 per month, indicating a persistent staffing or capacity gap that did not improve over the quarter.

3. RESOLUTION PERFORMANCE

- **73% of calls were resolved** on first contact
- **27% of calls remained unresolved**, representing 1,350 calls across Q1

The unresolved call rate of 27% is a significant concern. Unresolved calls typically lead to repeat contacts, increased operational costs, and lower customer satisfaction. Targeted agent training and improved escalation procedures are recommended to address this gap.

4. AGENT PERFORMANCE ANALYSIS

The agent statistics table summarises individual agent performance across key metrics:

Key Findings:

- **Jim** answered the most calls (536) and resolved the most (485)
- **Martha** achieved the highest satisfaction rating (3.47)
- **Becky** had the fastest speed of answer (65.33 seconds)
- **Joe** had the slowest speed of answer (70.99 seconds) and the lowest satisfaction rating (3.33)
- **Stewart** answered the fewest calls (477) suggesting possible availability issues

5. SPEED OF ANSWER vs SATISFACTION RATING

Our analysis reveals no strong direct correlation between speed of answer and satisfaction rating. Customers who waited longer did not consistently rate calls lower, suggesting that call resolution quality matters more than speed in driving customer satisfaction.

6. CUSTOMER SATISFACTION ANALYSIS

- Overall average satisfaction rating is **3.40 out of 5**
- This falls in the **moderate range** — neither poor nor excellent
- No agent scored above **3.47** or below **3.33**, indicating **consistent but average** customer experience across the team

A satisfaction score of 3.40 suggests customers are adequately served but not delighted. Improving first-call resolution rates and agent communication skills could push this score above 4.0.

7. KEY INSIGHTS

- **Strength — High Answer Rate** 81% of calls were answered, demonstrating good availability and staffing levels during operating hours.
- **Strength — Consistent Agent Performance** All 8 agents performed within a narrow range across all metrics, showing a well-trained and balanced team.
- **Concern — Persistent Unresolved Calls** 27% of calls going unresolved every month suggests systemic issues in problem-solving capability or knowledge gaps.
- **Concern — Stagnant Unanswered Calls** 300 unanswered calls every month without improvement suggests a recurring capacity issue during peak periods.
- **Concern — Moderate Satisfaction Score** A 3.40 rating indicates customers are satisfied at a basic level but the center is not delivering exceptional service.

8. RECOMMENDATIONS

1. Improve First-Call Resolution Invest in agent knowledge base tools and escalation protocols to reduce the 27% unresolved rate. Target a resolution rate of 85% or above.
2. Address Peak Hour Staffing Review call volume by hour and schedule additional agents during peak times to reduce the consistent 300 monthly unanswered calls.
3. Agent Coaching for Joe and Stewart Joe recorded the slowest answer speed and lowest satisfaction rating. Stewart handled the fewest calls. Both agents would benefit from targeted performance coaching.
4. Recognise and Learn from Top Performers Martha's satisfaction rating and Jim's resolution volume should be used as benchmarks. Their techniques should be shared across the team through peer learning sessions.
5. Customer Satisfaction Target Set a Q2 target of 4.0 average satisfaction rating and introduce post-call surveys to gather qualitative feedback alongside ratings.

9. CONCLUSION

The call center demonstrated solid foundational performance in Q1 2021 with a strong answer rate and consistent agent output. However, the 27% unresolved call rate and moderate satisfaction score of 3.40 highlight clear opportunities for improvement. By focusing on resolution quality, peak hour staffing, and targeted agent development, the center can significantly improve customer experience and operational efficiency in Q2 2021.
